(54) Title: A FUNCTIONAL COVER FOR USE WITH A WIRELESS TERMINAL.

(57) Abstract: A wireless communication terminal has a user exchangeable cover part. The wireless communication terminal and user exchangeable cover part are electrically interconnected by means of an electrical connector. The user exchangeable cover part comprises identification means. The user exchangeable cover part has an electric circuitry for supporting a user interface of the wireless terminal. The wireless terminal identifies the user exchangeable cover part by detecting the identification means. The wireless terminal operates the electric circuitry of the user exchangeable cover part independently of the identification of user exchangeable cover part.
